Hazardous Weather

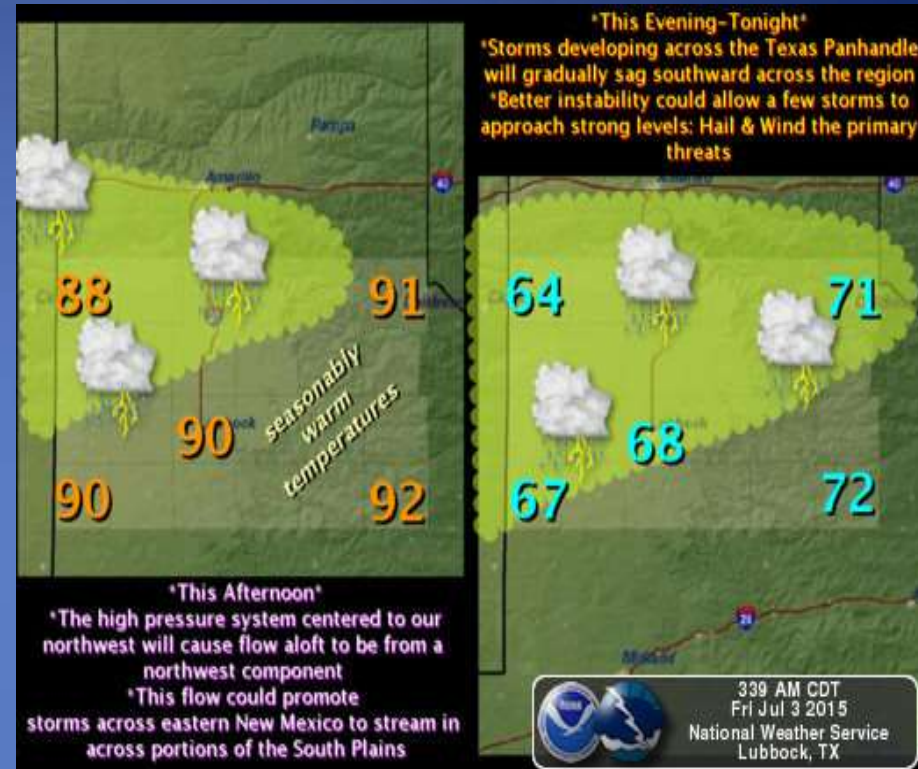

Temperatures will continue their upward climb today, with highs pushing into the lower to upper 90s across much of the inland areas and into the mid to upper 80s along the coast. A mix of sun and clouds can be expected along with isolated showers and thunderstorms, with the greatest chance for rain across the coastal counties and over the coastal waters. Otherwise southeast winds will become breezy this afternoon and average 20 to 25 mph across the coastal counties and 15 to 20 mph further inland.

Hazardous Weather

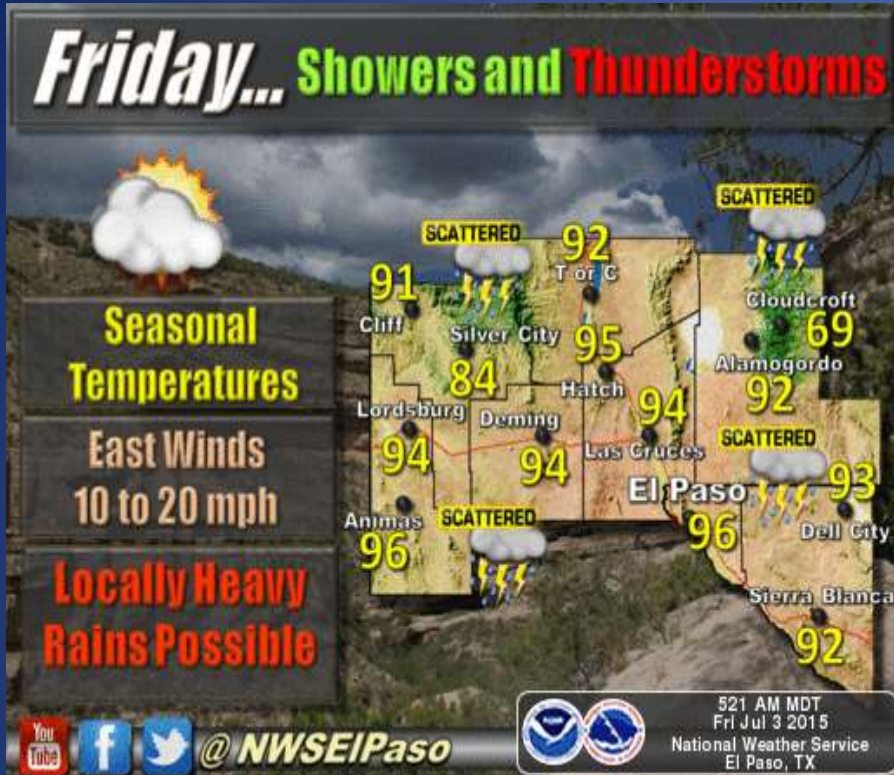

An upper level disturbance will generate scattered showers and thunderstorms across parts of north Texas today. The best rain chances will occur across the northern half of the region where lift associated with the upper level feature will be the strongest. High temperatures should remain in the upper 80s near the Red River, while 90s will be common across the south where sunshine will be more plentiful. Otherwise, southwest winds 10-15 MPH are expected.

Upper level high pressure will shift back to the west and allow improved northwest flow aloft which will aid in perhaps storms drifting to across portions of the South Plains from east New Mexico this afternoon. Storms should be most concentrated near a somewhat stationary front across the Panhandle and Oklahoma this evening. But occasional outflow boundaries to the south could also allow storms to generate further south across the South Plains region this evening into tonight. Highs will be around seasonal normals.

Hazardous Weather

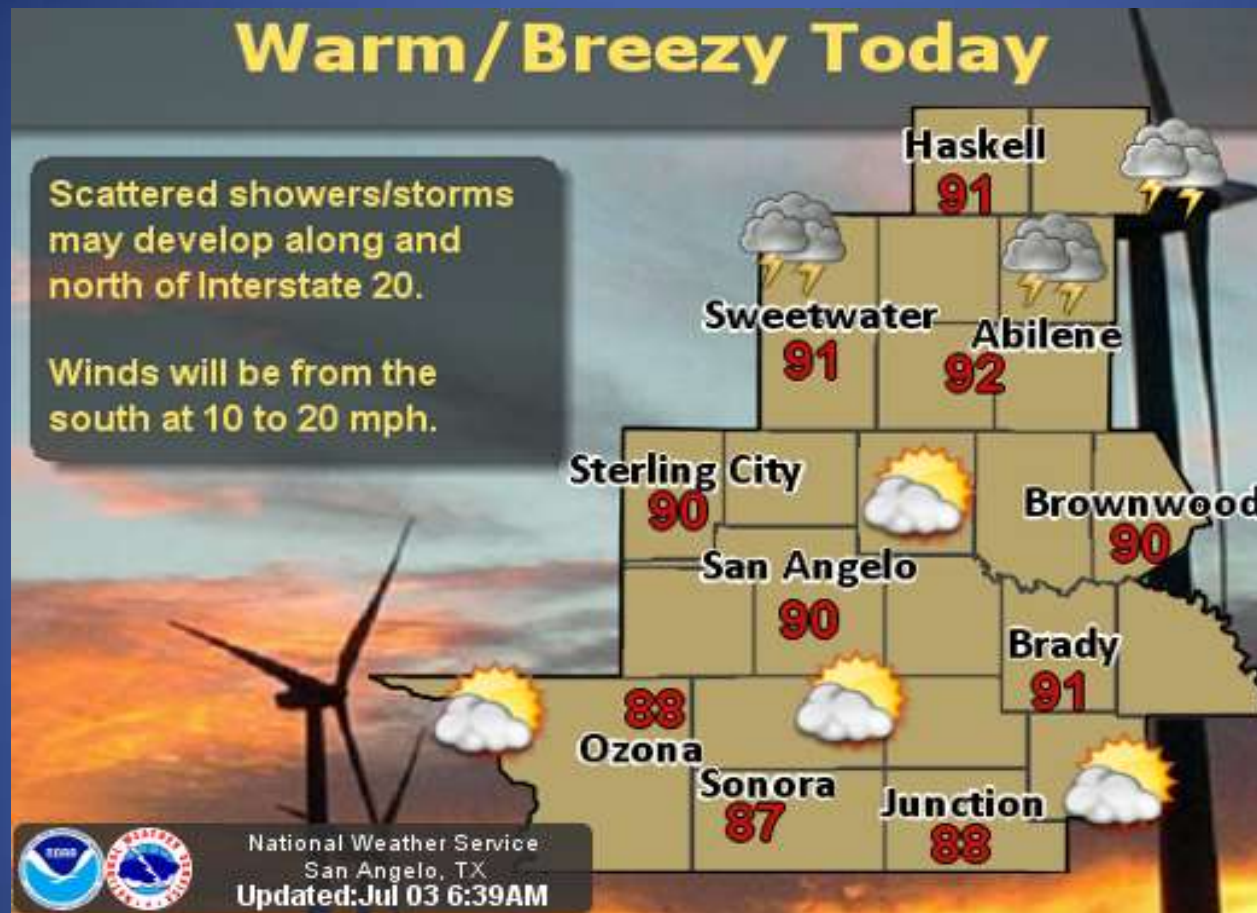

Moist air will flow into New Mexico and west Texas and this will result in scattered showers and thunderstorms today. Heavy rains may fall over a few locations. High temperatures will be in the lower and middle 90s lowlands with mostly 70s and 80s mountains.

A couple of outflow boundaries will move south into the area today and provide a low level focus for thunderstorms development. Additional storms will form over the higher terrain of southwest Texas. Coverage is not expected to be great, but locally heavy rainfall, gusty winds and frequent lightning may result from the stronger storms.

Hazardous Weather

Morning clouds will decrease in coverage by the afternoon. Scattered showers/storms may develop north of Interstate 20.

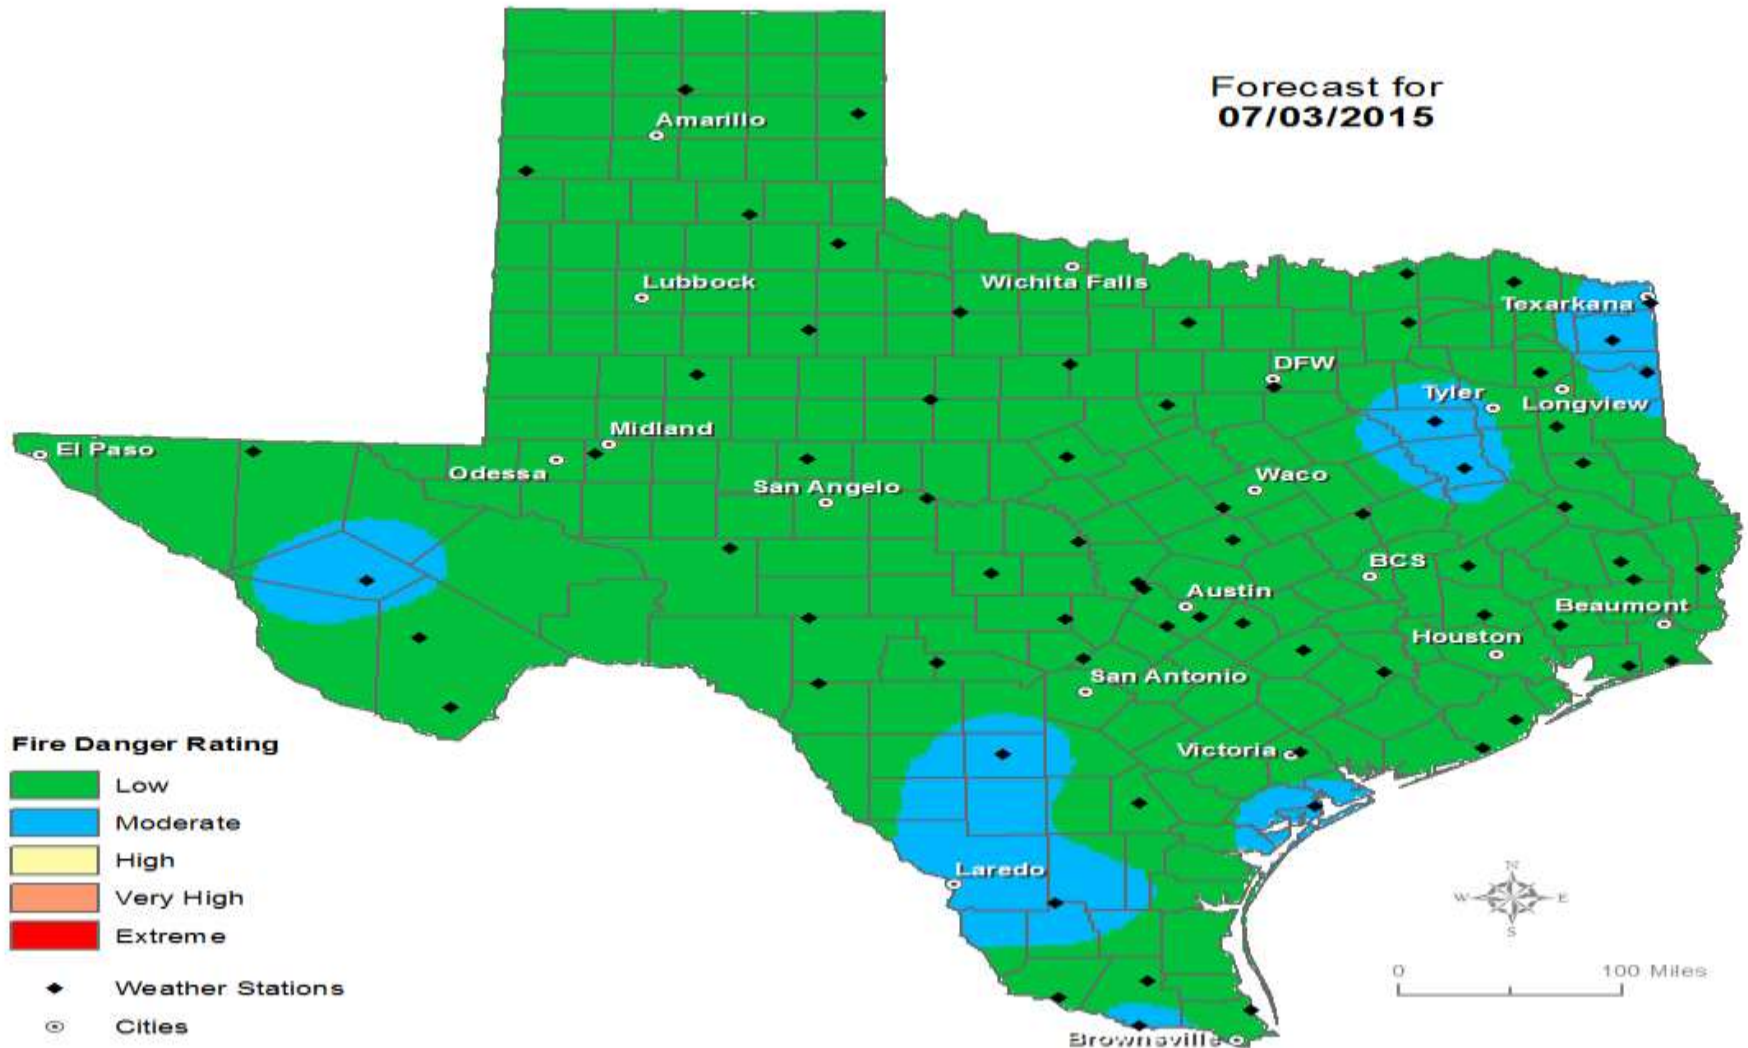

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
07/02/15	Significant Weather Statement	Armstrong, Briscoe, Collingsworth, Donley, Gray, Hemphill, La Salle, Lipscomb, McMullen, Ochiltree, Roberts and Wheeler Counties
07/02/15	Severe Thunderstorm Warning	Armstrong, Carson, Collingsworth and Donley Counties
07/02/15	Flood Warning Continues	Trinity River affecting Liberty County; Guadalupe River affecting Calhoun, Refugio and Victoria Counties

Fire Danger Forecast

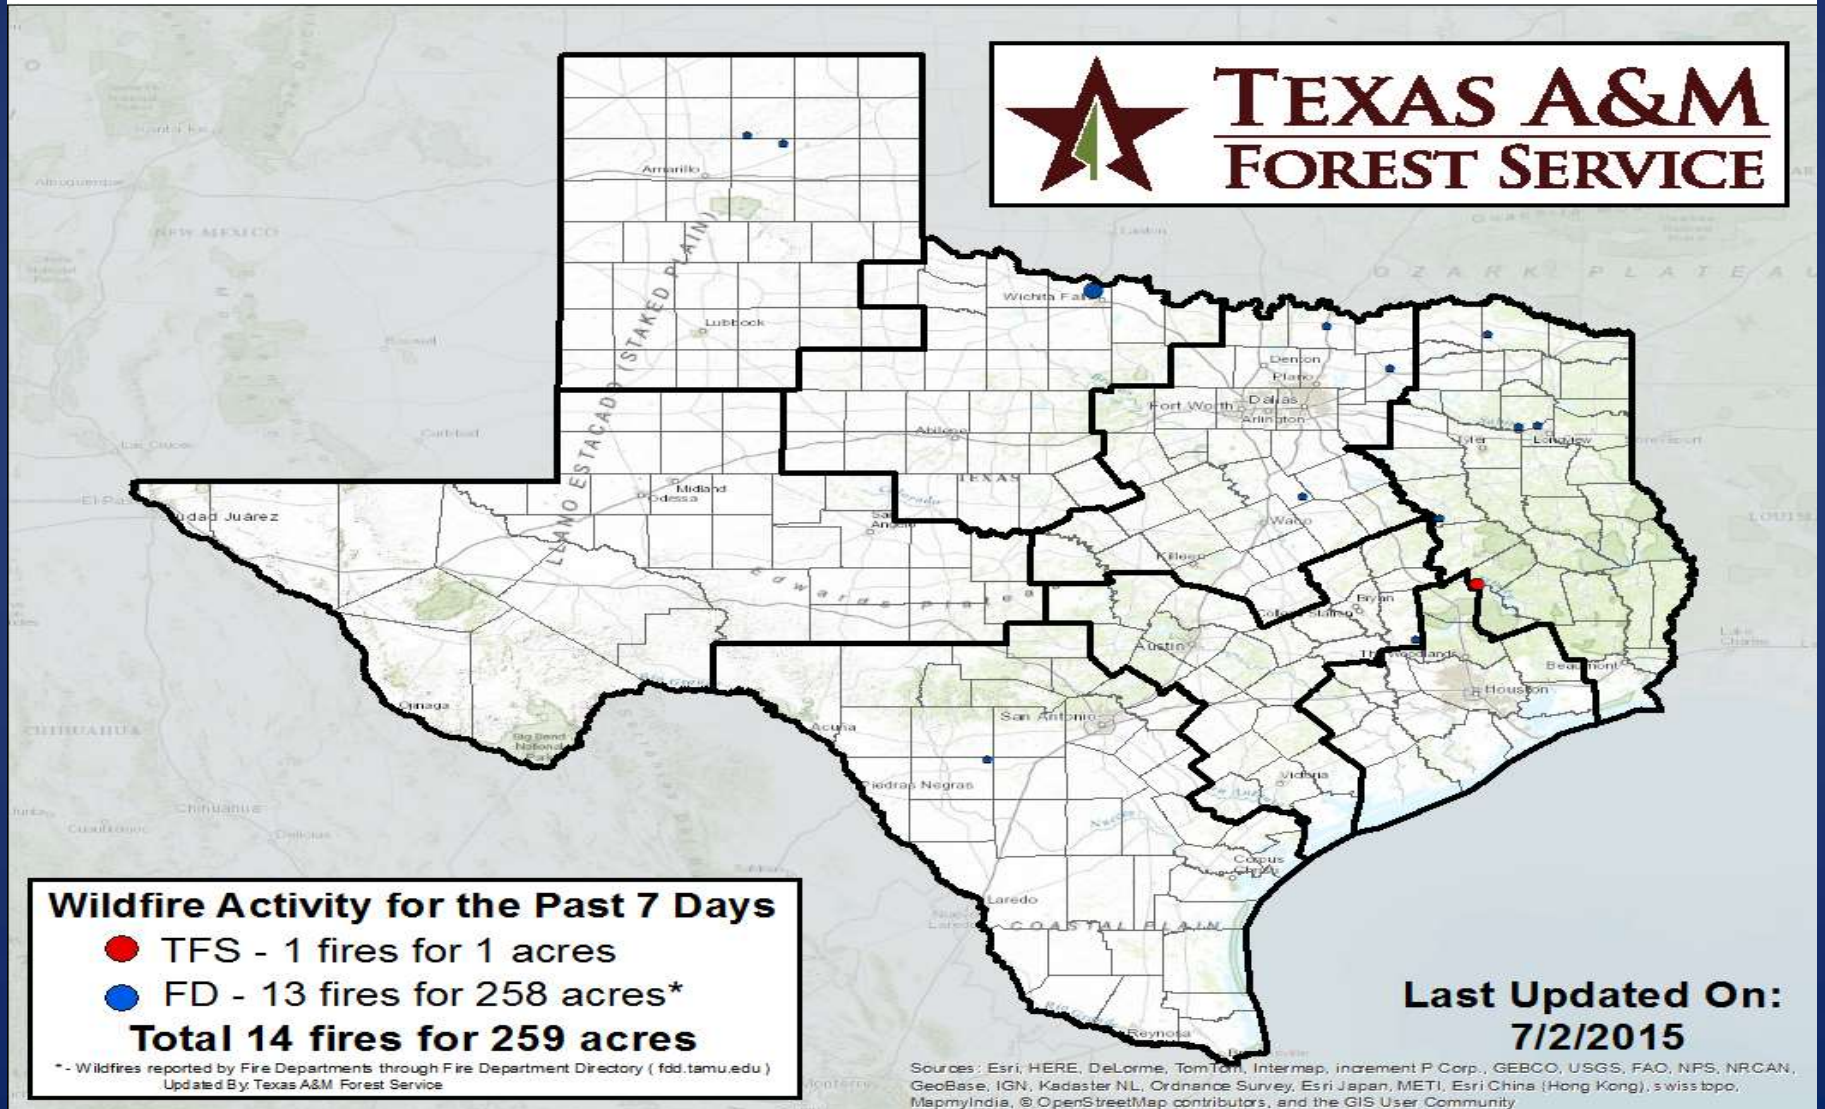

Forecast Fire Danger

Forecast for
07/03/2015

Fire Activity (*Last 24 Hours)

Reports 164 (no change) fires and 6,695 (no change) acres destroyed this year. There are 16 (no change) counties with burn bans. The Keetch-Byram Drought Index list 4 (no change) counties with an average over 400.
